POLICIES & PROCEDURES

POLICY MANUAL

CCI now offers our comprehensive hospital and ambulatory care policies on CD ready for edit. This product provides you the opportunity to customize CCI's established policies yourself at a reduced cost. Our policies footnote the accreditation group(s) regulation to the corresponding methodology indicated in the policy. Comments are embedded to assist you with editing as well as referencing the other policies that must correspond. When you see a **red statement** you may change the methodology of implementation but not the intent of the statement. This allows you the opportunity to customize your policies with the comfort of knowing that the requirements for accreditation are clearly designated.

TREATMENT PROTOCOLS

CCI also offers our copyrighted Treatment Protocols on CD. Our Treatment Protocols include the anatomical site, indications, treatment strategy, chemotherapy, anatomical points of interest, example doses to be administered, procedure parameters, requested outside studies, requested contrast media during simulation, prep procedures, positioning and positioning aids, simulation process, treatment borders, nursing & therapist care parameters, tattoo requirements and port film protocol. By purchasing the treatment protocols on CD, you will have the flexibility to adjust your protocols as procedures change in your department. The goal of a good treatment protocol is to have any professional in our modality be able to treat your patients by referencing your protocols.

NURSING CARE PLANS

Our Nursing Care Plans follow the patterns of care criteria for each diagnosis. The outcomes and expected interventions format provide the nurse with the perfect patient education program and a precise documentation tool.

Requirements

All materials are written using Microsoft Word XP and Excel (application not included).

TQM

TOTAL QUALITY MANAGEMENT PROGRAM

All elements of a successful program have been written by CCI. This program includes an inclusive TQM program outline as well as a full CQI and Risk Management Program.

Our proven TQM program is now available for self edit. After interviewing these materials for over ten years, we found that organizations made so few changes, that it isn't necessary to interview this program anymore. *Our program is that complete!*

Continuous Quality Improvement

Our CQI Program includes provisions for chart rounds, outcome studies and peer review. Our proven data collection forms and programs are easy to implement in your organization.

- Key processes: *chart rounds checklist*
- Performance measurements: *improve, monitor, benchmark*

Performance Measurements

A full myriad of Performance Measurements (PM) will be provided for those high risk, high volume, problem prone areas every cancer center encounters. The PM will include the patient care function (key process), performance measurement statement, dimension (i.e., efficacy, continuity, safety, appropriateness, efficiency, timeliness, respect and caring), sample assessment, and easy to use forms and/or methodologies to document the outcome.

Team Planning via Teleconference

Assistance is available on-site or via teleconference. Let Churchill facility your team planning meeting and define appropriate measurement criteria. We will then establish easy to use documentation methodologies for processes not currently addressed in your program. As you will already have the tools, a CCI consultant will facilitate the meeting.

Data Collection

Data collection models will be quantitative. Outcomes will be measured and assessed. All processes will lead to improved patient care, safety and efficiency.

Customized TQM Forms Include:

- Quality Checklists for Chart Rounds
- Peer Review
- Orientation, Training Lists & Staff Competencies
- Various logs, i.e., missed appointments, calculations, block corrections, etc.

FRAMEWORK FOR QA

Design refers to the rational, deliberate process of creating a quality service as viewed by those who receive it and provides opportunities to build into the service or product the dimensions of improvement.

Measurement involves both routine, ongoing data collection for processes or functions performed by individuals or multi-disciplinary teams or groups, as well as time-specific, focused data collection.

Assessment of the data helps you draw conclusions about current performance and decide whether to pursue an opportunity for improvement or resolution of a problem.

Improvement activities should be prioritized in terms of their potential to enhance patient care. Successful processes usually involve planning an improvement, testing a new approach, collecting data about its effects, and then taking action to standardize the improvement or repeating the process if results are not satisfactory.

Redesign of an existing function or process that hasn't achieved the desired improvement will lead back to **Design**.

PATIENT INSTRUCTIONS

Provide your patients with detailed instructional information for every procedure performed in your department, using Churchill Consulting, Inc's complete package of patient instruction forms.

Package Includes

- Site Specific Informed Consents
- Site Specific Simulation & Treatment Instructions
- PT Education & Intervention Instructional Handouts
- Advance Directive Information Forms
- Discharge Instructions
- Site Specific Weekly Assessment Forms
- Site Specific Follow-Up Assessment Forms
- Patient Complaint Forms
- Patient Satisfaction Surveys and Questionnaires
